# Replacing the Waterless siphon

1 Insert the siphon key into the siphon/water trap and turn the siphon key anti-clockwise (left) to release the siphon/water trap.

2 Lift and tilt the siphon/water trap to pour out the excess liquid.

3 Place the siphon/water trap in the bag, tie a knot on the bag and dispose of it with general waste.

4 If necessary, scrub the housing clean with a urinal brush to keep the drain properly clean.

5 Rinse the housing clean with 8-10 litres of soapy water and then wipe the steel ring clean.

6 Place a new siphon/water trap in the housing and turn it clockwise (right) to lock it in place.

7 Pour approx. 1-2 litres of water into the siphon/water trap until it is full or until it stops bubbling.

8 Add the blue barrier fluid and give it some time to drain into the siphon/water trap. Wipe away excess barrier fluid with a damp cloth.

9 Spray Waterless cleaner no. 25\* on and around the siphon/water trap and then wipe it clean.

10 Cleaning with a cloth.

11 The urinal is now ready for use.

## Waterless urinals

Cleaning and replacing the siphon

# Cleaning

Spray Waterless Cleaner no. 25\* on both the inside and outside of the urinal and let it work for a few minutes.

Wipe the inside and outside of the urinal with a wrung-out cloth.

Important: Never pour water into the urinal, as the blocking fluid will be flushed away.

The non-porous surface makes cleaning quick and easy.

## When should the Waterless siphon/water trap be replaced?

1. At 8-10,000 visits or 2-3 times a year, depending on usage.
2. When the barrier fluid/urine flows very slowly into the siphon/water trap.
3. When the barrier fluid/urine does not flow into the siphon/water trap at all.

We recommend a service agreement with Waterless or a local plumber.
